

June is Pterygium Awareness Month

Do you have

Pterygium? Surfer's Eye? Carnosidad?

This June come into any of our 3 convenient locations to have a **FREE SCREENING** for pterygium.

If you spend lots of time in the sun or water and have noticed a thin pink film progressing from the corner of your eye, then you should get a **FREE SCREENING**. Treating pterygium early could save your eyes from permanent damage. Breakthroughs in technology have all but put a stop to reoccurrence and discomfort in treating this issue. By spreading this news you'll be helping so many people continue to have healthy eyes this summer!
